

Zirax launches WOTASOFT Clear Brine Fluids for energy segment

Zirax makes first introduction to the market WOTASOFT Clear Brine Fluid, which enables oil drilling companies and production operators to get additional hydrocarbon production from the wells reducing the well shutdown time and costs associated with emulsions and water cut protection. WOTASOFT Clear Brine Fluids, having multi-salt and single-salt compositions with minimum impurities content, are equipped with patented hydro-phobia agents and corrosion inhibitors, which enable operators to make significant reduction in emulsions inside the formation zone, reduce the water output from the well and get down the shutdown time of the well after work over operations. Several tests of WOTASOFT have been already made across Russian and Kazakhstan oilfields, which proved additional 30-50% reduction in shutdown time of the wells and close to 70% long lasting additional oil output after the work over operations made with WOTASOFT. Additional information on WOTASOFT performance is available on <http://www.youtube.com/watch?v=AXXu5CC9hkM>
