

**Zirax launches FUDIX food grade Calcium Chloride pellets 95-98% for international breweries, cheese production and water treatment**

Zirax launches internationally new grade of synthetic calcium chloride pellets for food applications branded as FUDIX. Having seen increased demand for high quality food additives for beer and cheese production Zirax launches new grade of synthetic calcium chloride called FUDIX 95-98%, which immediately grasps strong interest from local and international breweries and dairy producers in Russia and CIS. FUDIX CaCl<sub>2</sub> 95-98% pellets produced at Zirax Volgograd CaCl<sub>2</sub> facility are appeared as excellent solution to make pre-treatment of water and milk during production processes bringing additional customer value for the end-users due to higher content of calcium and lower impurities level comparing to existing analogs. Together with FUDIX launch Zirax is investing in national distribution chain to provide for 24 hours delivery of material for numerous breweries and dairy plants across Russia and CIS to follow the requirements of customers for in time delivery of high quality product and additional savings on logistics costs. Zirax FUDIX CaCl<sub>2</sub> 95-98% pellets are Kosher and Helal certified.
