

Zirax enters Russian national highway winter maintenance program

Zirax signs contract with several Russian national highway agencies for supply of high quality de-icing materials based on Calcium Chloride following the newly adopted national government program "Clean City & Clean Roads" aiming to increase the quality of winter road maintenance across Russia.

The program adopted by the government and sponsored by major Russian banks and investment funds involves re-investment of Russian road maintenance infrastructure with advanced chemicals distribution machinery, by-road storage and dissolving facilities and purchase of high quality anti-icing and de-icing materials as alternatives to traditional salt and sand mixtures. The program is focused on all Russian major highways and metropolitan areas across the country.
